

**Stockholm| 28.05.2014**

TECHNISCHE  
UNIVERSITÄT  
DARMSTADT

## **4<sup>th</sup> Conference on Learning Factories**

### **The $\eta$ -Factory –**

**An interdisciplinary learning factory approach to boost  
the energy performance of production**

Prof. Dr.-Ing. Eberhard Abele  
Christian Eisele  
Martin Beck

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

Bundesministerium  
für Wirtschaft  
und Technologie

**PTJ**  
Projekträger Jülich  
Forschungszentrum Jülich

# Facts and Figures of energy consumption in industry

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

## Electr. Power Demand Germany 2011

Total consumption 540,8 Mrd. kWh

## Saving Potential

**20 - 40%** of the electrical power is lost as heat, this corresponds to 5 - 10 Mrd. € per year

Source: AG Energiebilanzen und VDI Nachrichten Nr.39/2012

## Saving Strategies

### System Design

Intelligent interaction of Machines, Building and Technical Building services

### Machines

Optimization of Machines and research of innovative processes

### User behaviour

Training of personell and staff

# Waste heat in Manufacturing environments

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

## Building

- Insulation
- Re-Use

## Process Chain/ Machines

- Energetic Interaction

## Machine Components

# The Challenge: Holistic increase of energy efficiency

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

**Today:** Optimization of subsystems within their system boundaries

## Subsystem Building

Quelle: Prof. Dipl.-Ing. J. Eisele

## Subsystem Technical Infrastructure

## Subsystem Machine

Total energy  
saving  
potential  
limited on the  
Subsystems

**Our vision:** Holistic factory optimization including all subsystems

High saving  
potential by  
realization of  
energy  
networks

## Interaction of:

- **Machines**
- **Process chains**
- **Buildings**

**Synergies by energy-controlling  
and recovery measures**

# The idea behind the model project $\eta$ -FACTORY

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

- Establishing a research and training center in the middle of Campus
- Developing an interdisciplinary approach for reducing CO<sub>2</sub> emissions (Including research in architecture and civil engineering)
- Involvement of industry from the beginning of the concept phase
- Educational integration of energy efficiency, training concepts

- International notable lighthouse project
- Source for innovation and technology development

# Fields of Innovation in $\eta$ -FACTORY

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

source:  
F. Lang – EuB TU Darmstadt

## Energetic interaction

- Energy exchange between building and machines
- Energy network between all energy sources and sinks

## Efficient Production

- Energy efficient equipment
- Energy efficient production scheduling

## Recyclability

- single-material cladding construction

## Changeability

- Modular and flexible Building construction

source:  
F. Lang – EuB TU Darmstadt

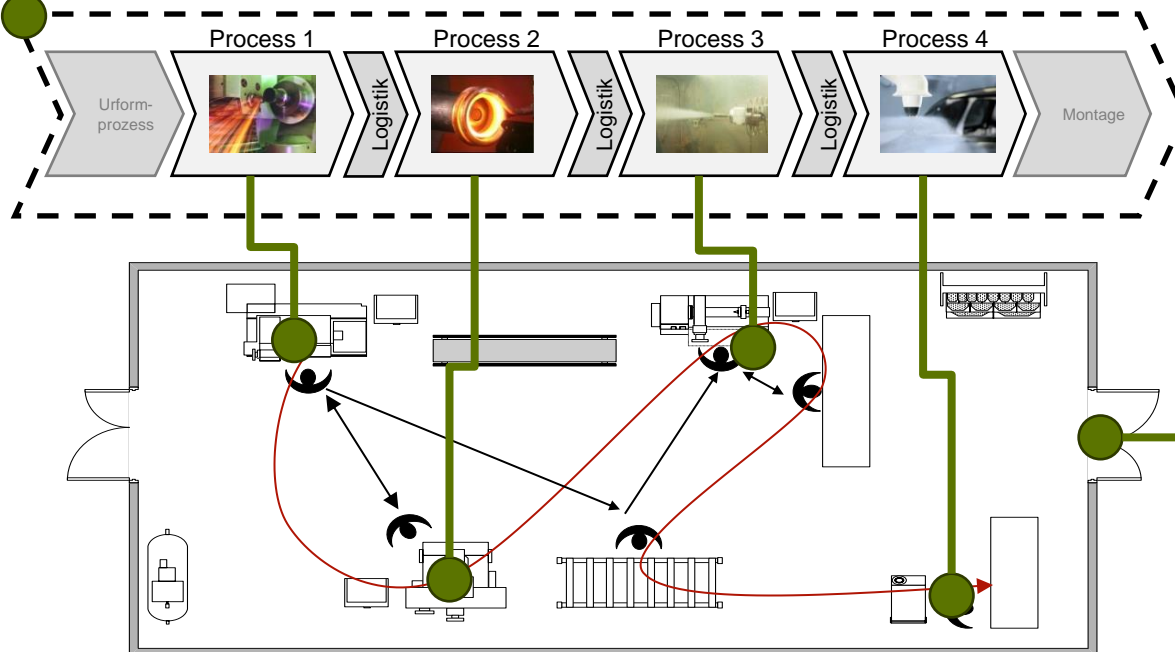

# The $\eta$ -FACTORY concept:

ENERGIEEFFIZIENZ  
TECHNOLOGIE-UND  
ANWENDUNGSZENTRUM

**Construction of a real existing process chain** for practice-oriented, interdisciplinary research to different topics of energy and resource efficient production

**Installation of a new research building** for the integration of the process chain and the realization of experiments about the interaction between processes and buildings

Development of a **training concept** to **transfer** the research results into **practice**

# Project structure

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

## Subproject 1

*The virtual energy efficient factory*

## Subproject 2

*Energy controlling and energy management*

## Subproject 3

*Energy efficient part cleaning*

## Subproject 4

*Energy resource efficient heat treatment*

## Subproject 5

*Energy efficient machining processes*

## Subproject 6

*Flywheel mass battery*

## Subproject 7

*Thermal interaction between building, infrastructure and production machines*

## Subproject 8

*Energy efficient Building*

# Energy flows and energy recovery in the $\eta$ -Factory

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

# Realisation of the $\eta$ -Factory at TU Darmstadt

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

Future position of  
the  $\eta$ -Factory

- Dimensions:  
45,80 m x 23,00 m x 12,00 m  
(length x width x height)
- shop floor: 650m<sup>2</sup>
- office area: 650 m<sup>2</sup>

## How to present Energy-Efficiency in a Learning factory?

### Energy

- ✗ how to measure Energy?  
(frequency, sensors, measuring points)
- ✗ has different forms (electrical, thermal, chemical, etc.)
- ✗ can be dangerous
- ✗ is used by many consumers in the factory (machines, peripheral systems)

### Efficiency

- ✗ criterias are hard to define
- ✗ is difficult to quantify
- ✗ is challenging to visualize

# ETA-LearningFactory - Concept

## Target Audience

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

### Industry

- Factory & Production Planners
- Managers
- Controllers
- Energy Managers
- Machine Designers

### Technical Planners

- Architecture
- Heating & Climatization
- Energy Networks
- Pressurized Air

picture source: tab Fachmagazin TGA

### University Students

- Bachelor  
*„raise enthusiasm“*
- Master  
*„deepen knowledge“*

### General Visitors

- Politicians
- Association Members
- Funding Parties

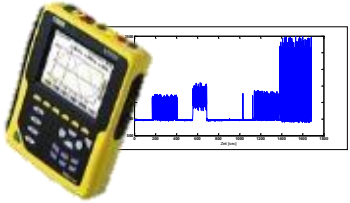

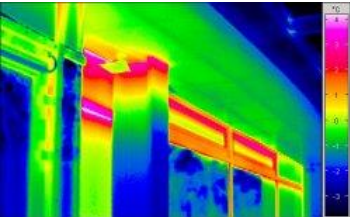

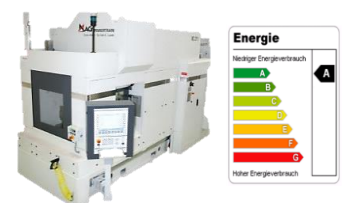

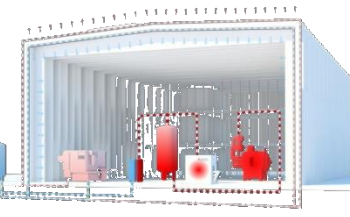

# ETA-LearningFactory - Concept

## Training Modules

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

<i>training module</i>	<i>topics</i>
	<p><b>Energy Flows in Factories</b></p> <ul style="list-style-type: none"><li>• Measuring Equipment and Installation of Sensors for different Energy forms</li><li>• Measuring Strategies (measuring points, accuracy, time resolution, duration)</li><li>• Visualization and Monitoring of Energy Flows</li></ul>
	<p><b>Assessment of Energy Efficiency Potentials</b></p> <ul style="list-style-type: none"><li>• Interpretation of Energy Measurement Data</li><li>• Methods for Identifying and Quantifying Energy Efficiency Potentials</li><li>• Key Performance Indicators for Assessing and Tracking the Energy Consumption and Efficiency</li></ul>
	<p><b>Levers to Increase Energy Efficiency</b></p> <ul style="list-style-type: none"><li>• Technical Levers (Improvement of machines and components, usage of alternative manufacturing technologies)</li><li>• Organizational Levers (establishing organizational structures, influencing user behaviour)</li></ul>
	<p><b>Design of Energy Networks</b></p> <ul style="list-style-type: none"><li>• Linkage of Energy Sinks and Sources</li><li>• Storage and Re-use of different Energy Forms</li><li>• Conversion of Energy, e.g. heat to cold</li><li>• Control Strategies for Energy Flows</li></ul>

# ETA-LearningFactory - Concept

## Training Means

ENERGY-EFFICIENCY  
TECHNOLOGY AND  
APPLICATION CENTER

### „The Way to Energy Efficiency“

**Lectures**

Oral Presentations

Powerpoint

Video Clips & Animations

Live Data (Machines, Building)

**Learning Cells**

Posters

Touchscreen Learning PCs

Exhibits

Augmented Reality Overlays

Interactive Simulations

Educational Games

**Workshops**

Brainstormings

Technology Analyses

Quality Function Deployment  
(QFD)

Business Cases

Thermographic Analyses

**Guides**

Handouts

Books

**Tablet/Smartphone App**

\* QR-Code / NFC spots in the factory

\* Augmented Reality feature

Hearing & Reading  
Seeing & Feeling  
Thinking & Speaking  
Doing  
Recapitulation

**Knowledge**

**Implementation**

# ETA-LearningFactory - Outlook
